Organization Summary

Microsoft Exchange is an enterprise-class email and calendaring system, available either as a cloud-based solution, or as an on-premises installation.

General Settings

Name	contoso.com
Identifier	0595cddd-0312-4163-b74a-dacf20028cd8
Organization Type	Exchange Online
RBAC Configuration Version	15.20.1643.16
Version	15.20.1643.16

Compliance Management

Compliance Management functionality provides the ability to create policies to manage email lifecycle, retain messages for the length of time based on business, legal, and regulatory requirements, and preserve email records for litigation and investigation purposes.

Journal Rules

Journaling is the ability to record all communications, including email communications, in an organization for use in the organization's email retention or archival strategy. To meet an increasing number of regulatory and compliance requirements, many organizations must maintain records of communications that occur when employees perform daily business tasks.

General Settings

Undeliverable Report Address	undeliverable@contoso.com
-------------------------------------	---------------------------

2 Journal Rules

Name	Enabled	Recipient	Send To
 Journal Rule 1	True	user@contoso.com	journal1@contoso.com
 Journal Rule 2	False	user@contoso.com	journal2@contoso.com

Journal Rule 1

Journaling is the ability to record all communications, including email communications, in an organization for use in the organization's email retention or archival strategy. To meet an increasing number of regulatory and compliance requirements, many organizations must maintain records of communications that occur when employees perform daily business tasks.

Description	

Add-In Settings

Enabled	True
Default State	Enabled
Permissions	Read\write item
Provider Name	Microsoft
Version	1.0

Suggested Meetings

Add-ins are applications that extend the functionality of Outlook clients by adding information or tools that users can access without having to leave Outlook.

General Settings

Name	Suggested Meetings
Description	Shows meeting suggestions found in your email and allows you to add them to your calendar. This add-in will not share your data with any third-party service.

Add-In Settings

Enabled	True
Default State	Enabled
Permissions	Read\write mailbox
Provider Name	Microsoft
Version	1.1

Unsubscribe

Add-ins are applications that extend the functionality of Outlook clients by adding information or tools that users can access without having to leave Outlook.

General Settings

Name	Unsubscribe
Description	This add-in is triggered by messages from subscription email feeds, and allows you to block the sender or unsubscribe from the source. This add-in will not share your data with any third-party service.

Add-In Settings

Enabled	True
Default State	Enabled
Permissions	Read\write mailbox
Provider Name	Microsoft
Version	1.0

Permissions

Microsoft Exchange provides permissions based on the Role Based Access Control (RBAC) permissions model, which can be used to grant permissions to administrators and users.

Admin Roles

Admin role groups combine together permissions that can be assigned to administrators in the organization.

16 Admin Roles

Name	Description
 Compliance Management	This role group will allow a specified user, responsible for compliance, to properly configure and manage compliance settings within Exchange in accordance with their policy.
 Discovery Management	Members of this management role group can perform searches of mailboxes in the Exchange organization for data that meets specific criteria.
 Help Desk	Members of this management role group can view and manage the configuration for individual recipients and view recipients in an Exchange organization. Members of this role group can only manage the configuration each user can manage on his or her own mailbox. Additional permissions can be added by assigning additional management roles to this role group.
 HelpdeskAdmins_1404554458	Membership in this role group is synchronized across services and managed centrally. This role group is not manageable through Microsoft Exchange. Members of this role group may include cross-service helpdesk or password administrators, as well as external partner groups and Microsoft Support. By default, this group is not assigned any roles. However, it will be a member of the View-Only Organization Management role group and will inherit the rights of that group.
 Hygiene Management	Members of this management role group can manage Exchange anti-spam features and grant permissions for antivirus products to integrate with Exchange.
 Organization Management	Members of this management role group have permissions to manage Exchange objects and their properties in the Exchange organization. Members can also delegate role groups and management roles in the organization. This role group shouldn't be deleted.
 Recipient Management	Members of this management role group have rights to create, manage, and remove Exchange recipient objects in the Exchange organization.
 Records Management	Members of this management role group have permissions to manage and dispose record content.
 RIM-MailboxAdmins249649434ebd453887d6f8bfa850517f	
 Role Group	This is a sample role group.
 Security Administrator	Membership in this role group is synchronized across services and managed centrally. This role group is not manageable through the administrator portals. Members of this role group may include cross-service administrators, as well as external partner groups and Microsoft Support. By default, this group may not be assigned any roles. However, it will be a member of the Security Administrators role groups and will inherit the capabilities of that role group.
 Security Reader	Membership in this role group is synchronized across services and managed centrally. This role group is not manageable through the administrator portals. Members of this role group may include cross-service administrators, as well as external partner groups and Microsoft Support. By default, this group may not be assigned any roles. However, it will be a member of the Security Reader role groups and will inherit the capabilities of that role group.
 TenantAdmins_453723128	Membership in this role group is synchronized across services and managed centrally. This role group is not manageable through Microsoft Exchange. Members of this role group may include cross-service administrators, as well as external partner groups and Microsoft Support. By default, this group may not be assigned any roles. However, it will be a member of the Organization Management role group and will inherit the capabilities of that role group.
 UM Management	Members of this management role group can manage Unified Messaging organization, server, and recipient configuration.

 View-Only Organization Management	Members of this management role group can view recipient and configuration objects and their properties in the Exchange organization.
 XIA Configuration Role	Provides the ability for XIA Configuration to document the configuration.

Compliance Management

Admin role groups combine together permissions that can be assigned to administrators in the organization.

General Settings

Name	Compliance Management
Description	This role group will allow a specified user, responsible for compliance, to properly configure and manage compliance settings within Exchange in accordance with their policy.

Unified Messaging

Microsoft Exchange Server Unified Messaging (UM) allows users to receive e-mail, voice, and fax messages in their Outlook inbox. Additional features include Voice Mail Preview which delivers a transcription of voice mail messages to a user's Inbox.

Auto Attendants

UM auto attendants can be used to create a voice menu system for an organization that lets external and internal callers locate, place, or transfer calls to company users or departments in an organization.

 3 Auto Attendants

Name	Status
 AutoAttendant	Enabled
 AutoAttendantWithBusinessHours	Enabled
