CRITICAL: Known Upgrade Issue

There is a known upgrade issue with the XIA Configuration Server v13.1 installer whereby the error "Error importing reporting items" is displayed and the installation fails to complete.

This occurs when reports have been manually created but not saved, leading to the Parameters column being null.

To avoid this issue the following script can be run within SQL Server Management Studio against the XIA Configuration Server database.

If there are no issues the script will complete successfully and report "0 rows affected".

```sql
-- Ensure that all Parameters columns have an XML value.
UPDATE [dbo].[Reports] SET [Parameters] = '<Parameters />'
WHERE [dbo].[Reports].[Parameters] IS NULL
```

T00807 - BREAKING: Updated .NET Framework to version 4.8.

Both the XIA Configuration Server and XIA Configuration Client now use the .NET Framework 4.8, this is updated automatically by the installation.

NOTE: When using automatic updates, if the .NET Framework version on the machine being updated is not .NET Framework 4.8, this will be automatically updated, however the machine must be rebooted for the automatic update to complete.
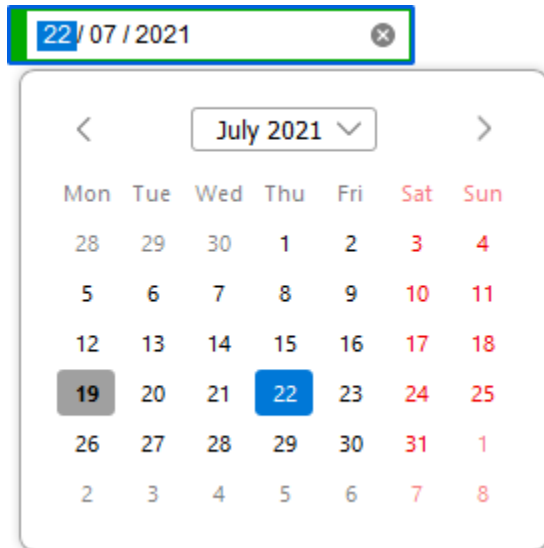

T00792 - BREAKING: The SNMP setting in dynamic agent plugins was renamed to Snmp.

The SNMP setting in the dynamic agent plugins was renamed to Snmp. Any dynamic agent plugins that use this property should be updated.

More information can be found in the [SNMP section](#) of the help.

T00824 - The CENTREL.Web.UI.DatePicker control was replaced.

The existing HTML date picker control has been replaced with a HTML5 control.

For more information see the DatePicker section of the help.
