XIA Configuration Version 15.1

XIA Configuration Server version 15.1 includes

- A completely rewritten Active Directory domain agent.
- The ability to document Active Directory schema attributes, foreign security principals, and managed service accounts.
- The ability to document domain based Distributed File System (DFS) namespaces and replication groups.
- The data comparer can now compare two Group Policy objects.
- Support for SQL Server 2022
- Various bug fixes and improvements.

Upgrading from a version older than v15.0?

If you're upgrading from a version older than v15.0, please also check the previous version upgrade notes.

- [Version 12.0 upgrade notes](#)
- [Version 11.1 upgrade notes](#)
- [Version 11.0 upgrade notes](#)

E91054 - Active Directory PowerShell cmdlets

The new Active Directory domain agent now requires the [Active Directory PowerShell module](#).

The [DFS Namespaces](#) and [DFS Replication](#) PowerShell modules are also required when reading distributed file system (DFS) information.

The tools (including the Group Policy Management Console) are installed automatically by the installer when the “Install Active Directory tools” option is selected.

During the upgrade to version 15.1 these tools are installed automatically.

To prevent the installation set the following registry key.

HKEY_LOCAL_MACHINE\SOFTWARE\CENTREL Solutions\XIA Configuration Service

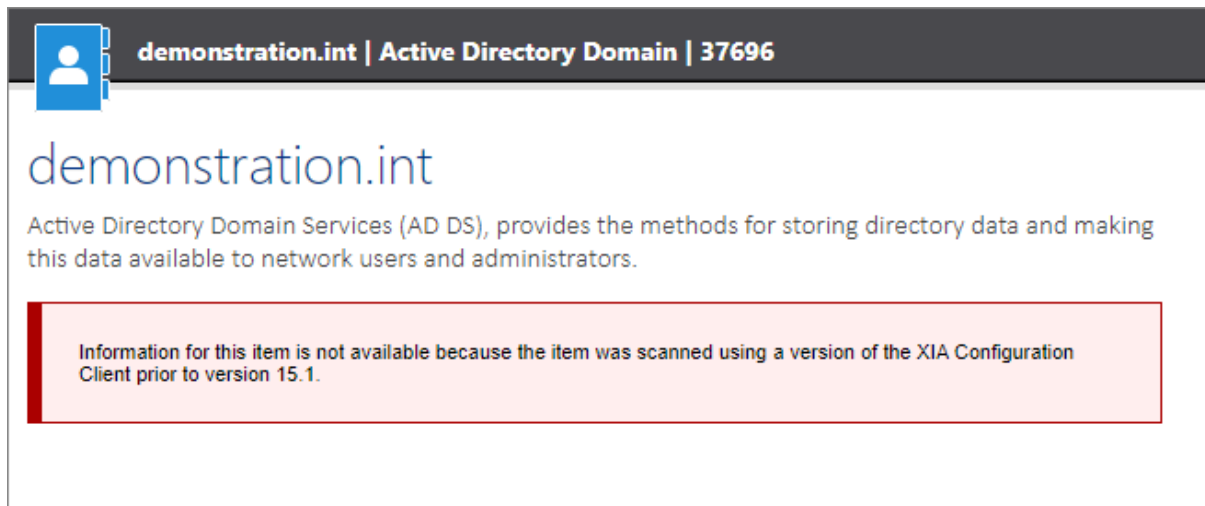

InstallActiveDirectoryTools (REG_SZ)

False

T01073 - Active Directory domains data model

The data model for Active Directory domains has been updated. Active Directory domains must be rescanned using the latest version of the XIA Configuration Client.

Active Directory domains scanned with a previous version of the XIA Configuration Client will not display information for these items.

The screenshot shows a user interface for an Active Directory domain. At the top, a dark header bar contains a blue icon of a person and the text "demonstration.int | Active Directory Domain | 37696". Below the header, the domain name "demonstration.int" is displayed in a large blue font. Underneath, a description reads: "Active Directory Domain Services (AD DS), provides the methods for storing directory data and making this data available to network users and administrators." A prominent red-bordered box with a light pink background contains the following warning: "Information for this item is not available because the item was scanned using a version of the XIA Configuration Client prior to version 15.1."

T01074 – Active Directory Domains client data model

The data model for the Active Directory domain agent settings has been updated.

This includes many new optional components and PowerShell remoting settings.

Customers are advised to review the new format of the settings and ensure that the configuration meets their requirements.
